

ACCENTURE 2027 BATCH

TECHNICAL ASSESSMENT — PREPARATION GUIDE

45 Questions | Subject-wise Coverage | Coding-Related Weightage | Preparation Priority

2. Bifurcation of the 45 Questions

The technical assessment consists of approximately 45 questions. The distribution below is based on the transcript and should be treated as an approximate pattern, not a fixed official blueprint.

Section / Subject	Approx. Questions	Topics to Cover	Priority
Computer Science	10–12	DSA & Algorithms, HTML/CSS, JavaScript, Operating Systems, SQL; OOPS is also relevant to the coding-related portion.	HIGH
Pseudocode	10–12	Output prediction, error identification, arrays, strings, loops, searching, sorting and basic program logic.	VERY HIGH
MS Office	≈7	Excel, Word, PowerPoint.	MEDIUM
Networking / Cyber Security / DevOps / Cloud	≈13–14	Computer Networking, Cyber Security, DevOps and Cloud Computing.	HIGH
Total	≈45	Combined technical-assessment coverage.	—

Important: The transcript uses approximate figures. The individual ranges may not add up to exactly 45 in every interpretation.

3. Most Important Technical Areas

A. Pseudocode

- Output prediction / dry run
- Error identification
- Arrays and strings
- Loops
- Searching
- Sorting
- Tracing program logic

Approximately 10–12 questions. This is one of the highest-weightage areas.

B. Data Structures & Algorithms

- Arrays
- Strings

- Searching
- Sorting
- Basic DSA and algorithmic concepts
- For the separate coding assessment: one DSA question is expected from basic areas; *DP, graphs, recursion and advanced topics are specifically not important.*

C. JavaScript / Web Basics

- HTML — basic code modification
- CSS — minor changes to given code
- JavaScript — understand and modify given code
- DOM manipulation
- Event listeners
- Functions

D. Operating Systems

E. SQL

- Data selection
- GROUP BY
- HAVING clause
- Aggregate functions
- JOINS — generally joining 2–3 tables; questions may involve 3–4 tables
- RANK queries — a slightly higher-level possibility
- Basic SQL syntax and query writing

F. OOPS

G. MS Office

- Microsoft Excel
- Microsoft Word
- Microsoft PowerPoint

Approximately 7 questions are indicated for MS Office.

H. Networking, Cyber Security, DevOps & Cloud

- Computer Networking
- Cyber Security
- DevOps
- Cloud Computing

These areas together account for approximately 13–14 questions and are described as the more difficult portion.

4. Coding-Related Weightage Inside the Technical Assessment

Approximately 20 of the 45 questions are coding-related. This includes pseudocode together with JavaScript, OOPS and SQL-related questions.

Component	Approx. Questions	What to Prepare
Pseudocode	10–12	Tracing, output, errors, arrays, strings, loops, searching and sorting.
JavaScript + OOPS + SQL	7–8	JavaScript fundamentals, DOM/event listeners/functions, OOPS fundamentals, SQL syntax, GROUP BY, HAVING, aggregate functions, JOINS and basic RANK queries.
Combined coding-related portion	≈20	Aim for high accuracy because this is a major component of the 45-question assessment.

Target: Aim to get approximately 17–18 of these 20 coding-related questions correct.

5. Preparation Priority

Preparation should not be evenly divided across all subjects. The technical assessment is described as the hardest and the major elimination stage, so preparation should be weighted accordingly.

Priority	Area	Preparation Focus
1 — VERY HIGH	Pseudocode	Maximum attention: output, errors, loops, arrays, strings, searching and sorting.
2 — HIGH	Computer Science + DSA	Focus on the specific topics listed above, especially arrays, strings, searching and sorting.
3 — HIGH	SQL + OOPS + JavaScript	SQL: GROUP BY, HAVING, aggregate functions, JOINS and RANK. JavaScript: DOM, event listeners and functions. OOPS: core fundamentals.
4 — HIGH	Networking + Cyber Security + DevOps + Cloud	Prepare the fundamentals of these four areas; the transcript identifies them as the difficult portion.
5 — MEDIUM	MS Office	Excel, Word and PowerPoint.
6 — ESSENTIAL	Previous-Year Questions	Revise previous-year technical questions and repeated patterns.

Recommended Preparation Order

1. Pseudocode
2. DSA & Algorithms + Core Computer Science
3. SQL + OOPS + JavaScript
4. Networking + Cyber Security + DevOps + Cloud
5. MS Office
